

# EV Series Automated Dispensing Systems

Easy automation for precise fluid application with simple vision pencil camera

EV Series pencil camera vision makes programming patterns easier.

Vision-guided DispenseMotion software makes programming easy.

Pencil camera verifies product presence.

Nordson EFD's EV Series automated systems include simple vision for precise fluid dispensing using EFD syringe barrel and valve systems.

Specialized vision-guided DispenseMotion™ software and a simple pencil camera make EFD automated systems quick to set up and easy to program. True three-dimensional motion control allows easy programming of dots, lines, circles, arcs, and compound arcs.

Platforms range from 150 x 200 mm to 570 x 500 mm, making them an ideal solution for batching or critical dispensing applications.

The EV Series can work as a standalone system or as a key part of an automated solution and is easily integrated into in-line transfer systems, rotary tables, and pallet assembly lines.

## Features

- Simple camera and DispenseMotion software make setup and programming easy
- On-screen preview of the dispensing path facilitates programming
- Streamlined file import and conversion
- True three-dimensional motion control
- Wide range of work envelopes

## Benefits

- Faster cycle and batch times
- Easy integration into any manufacturing operation
- Reduced production, material, and ownership costs
- New manufacturing opportunities
